PROJECTS

Image Manipulator in Java |

06/2021

CS3500: Object-Oriented Design

- Developed a Java project to apply manipulations and enhancements to images and export them as various file types.
- Utilized a highly Object-Oriented approach using the Model-View-Controller design pattern for improved extensibility and ease of modification.
- Collaborated with a classmate and utilized a GitHub repository to document the workflow.

Chess Robot |

03/2021 – Present

NURobotics Club

- Construct a X/Y Plotter with a modified manipulator to interact with custom chess pieces. Built with custom-designed and 3D printed parts using SolidWorks and Prusa 3D Printers.
- Implement Arduino and Raspberry Pi components to read the board state, control motors, and display information to the user.
- Incorporate a Chess AI to play against a human player.

Autonomous Swarm Marine Robots |

04/2022

Atlanta, GA

RoboTech 2022 Hackathon Submission

- Created a graphical simulation in Python for a swarm of aquatic drones tasked with cleaning algal blooms within a body of water utilizing path-finding algorithms.
- Implemented A* Search to generate paths for each drone to optimize the algae coverage for each drone.
- Included an RRT inspired algorithm to generate random paths for each drone based on a set of constraints.

Excel To LaTeX Converter |

12/2020

Personal Project

- Created a Python script to accept user input of copied Excel cells and convert to source code for a LaTeX table.
